

Hermosa Beach Police Department
540 Pier Ave, Hermosa Beach, CA 90254

April 10^h, 2025

Thank you for your agency's interest in Peregrine's unified data platform ("the Peregrine platform" or "the platform"). The Peregrine platform has been built with law enforcement and public safety agencies in mind, making it uniquely suited to the needs of the Hermosa Beach Police Department (HBPD). The Peregrine platform is the only end-to-end software available on the market with the following integrated capabilities:

- **Purpose-built data integrations Specifically for systems used by HBPD.** Peregrine offers proven, pre-built connectors that allow for seamless integration with critical existing HBPD systems such as Tiburon CAD, Mark RMS, Axon Evidence.com, Axon LPR, Laserfiche, Crossroads and other systems. These pre-built connectors eliminate any requirements for HBPD IT to develop and maintain interfaces between Peregrine and HBPD source systems and ensure that data available in Peregrine is complete, accurate, and always up-to-date.
- **Fully Integrated Search, Map, Link Analysis, Reporting, and Dashboarding.** Peregrine offers the only solution on the market that offers a fully integrated set of user-facing applications for search, map-based analysis, link analysis, reporting, and dashboarding that allow for seamless movement of data between those applications without the need to export and import data manually. Additionally, Peregrine is the only solution that offers desktop, laptop, tablet, and mobile device accessible versions of those integrated applications so that they can be accessed by authorized users wherever and whenever they are needed.
- **Proprietary Data Deduplication Algorithms (patents pending).** Peregrine offers proprietary algorithms (*patents pending: 18/789322, 18/789326*) that will enable automatic and auditable deduplication and merging of data, such as person records. This will allow HBPD to have automatically clean, reliable information upon which to conduct data searches and compile reporting products without the need to make any changes to the agency's underlying source systems.
- **Proprietary Ontology Purpose-Built for Law Enforcement.** Peregrine offers the only dynamic ontology capability that has been purpose-built for Law Enforcement data. This allows the HBPD to automatically establish connections and relationships between data elements within and across disparate systems that are otherwise likely to be missed. Additionally, Peregrine's dynamic ontology allows the HBPD to have fully flexibility to change its desired data model over time without needing to build and maintain additional interfaces or make any changes to the agency's underlying source systems and the way they store or represent information. The Peregrine Ontology has been developed and continuously refined to specifically accommodate law enforcement data and concepts.
- **Secure Collaboration and Data Sharing.** The Peregrine platform's proprietary integration, ontology, and granular security permissions enable secure sharing within the HBPD and between HBPD and partner agencies, public and private, that is otherwise not possible. Within the HBPD, this will allow secure collaboration across investigations, patrol, custody operations, traffic, analysis and command staff. Additionally, Peregrine will allow the HBPD to securely collaborate and share data in a common platform with critical current and future Peregrine customer agencies nearby in Los Angeles County and Orange County. For example, LAPD, Glendale PD, Redondo Beach PD, Alhambra PD, Orange County SO, Anaheim PD, Costa Mesa PD, Huntington Beach PD and others. All data sharing and collaboration features are automatically synchronized with HBPD's existing user, group, and role security and access policies.
- **Fully Open and Interoperable Architecture.** Peregrine is the only solution on the market that ensures the HBPD will never be at risk of vendor lock-in or issues related to data ownership. Peregrine's fully open and interoperable architecture

is fully vendor-agnostic, allowing Peregrine to integrate data from any current or future HBPD solution and allow any such solutions to access data from Peregrine, without limitation, if desired by HBPD. A customer retains full and total rights to its data within Peregrine at all times and has the ability to access and export that data in open, standard data formats at any time.

- **End-to-end security, CJIS, and CAL DOJ compliance.** Peregrine is hosted on the secure, CJIS compliant Amazon Web Services (AWS) Government Cloud region. Peregrine meets or exceeds all standards and controls set forth in the most current CJIS and CAL DOJ security policies. Peregrine has been approved at multiple California agencies to handle sensitive information such as criminal justice information. Additionally, Peregrine offers seamless integration with HBPD's existing single-sign-on and multi-factor authentication services. This allows HBPD to avoid any redundancy and duplication in managing user access and permissions and automatically ensure all interactions with sensitive data are compliant with existing agency data and information system security policies.

We look forward to working with HBPD in the near future. If there are any additional questions, please do not hesitate to reach out to me directly.

Thank you,
