## FIELD VERIFICATION

The hydraulic modeling relies on survey data input. The majority of City owned manholes were surveyed for rim elevation and pipe invert elevations. However, some manholes were inaccessible during survey and data was not collected. During modeling, the missing data was estimated based on rim elevations, if available, and the elevations of adjacent pipes. The inexact nature of the estimated data increases the error inherent in the model results. It is recommended that this estimated data be field verified to help validate the model results. Table D-1 lists the estimated rim elevations for manholes and Table D 2 lists estimated pipe inverts.

**Table D 1: Estimated Rim Elevations**

| Manhole with Estimated Rim Elevation | Estimated Rim Elevation |
|--------------------------------------|-------------------------|
| 0023                                 | 36.5                    |
